Subject Index to Volume 7

A

Adaptive
- fuzzy control, 39–52, 501–511, 533–543
- tracking, 479–491
- thresholding in image processing, 639–651

Agent-based frameworks, 685–693

AI in
- biotechnology, 23–30
- blank and steel socket routing, 407–413
- cement kiln processes, 255–266
- deep drawing processes, 395–405
- designing mines, 415–425
- electric drives, 501–511
- environmental engineering, 23–30
- ethylene production, 329–333
- fish processing, 571–586
- flexible assembly cells, 67–76
- hovercraft platforms, 513–519
- inspection of electric lamps, 31–37
- metallography, 455–459
- modelling river network systems, 447–454
- multimedia systems, 593–606
- power system stabilizers, 545–558
- production of continuous castings, 493–499
- railway traffic control, 311–319
- refineries, 349–360
- water bath process control, 39–52

Approximate reasoning, 367–380

Associative memory in neural networks, 1–21

Attentive vision, 205–215

Augmented fact-proposition spaces, 627–636

Automated
- load-sharing, 571–586
- visual inspection systems, 31–37

Autonomous underwater vehicles, 105–117

B

Bayes method, 169–176

Behaviour based control, 521–531

Blackboard systems, 105–117, 255–266, 367–380, 571–586
- temporal, 255–266

Book reviews, 85–87, 335–337, 461–462

C

Command and control systems, 119–135

Comparison
- adaptive fuzzy-neural controllers vs basic fuzzy and conventional PI controllers, 39–52

Complex circular shells, 395–405

Composite images, 299–310

Computer
- integrated manufacturing, 407–413
- networks, 279–288
- improving performance of, 279–288
- vision, 627–637

Concurrent engineering, 685–693

Configuration subspace models, 267–277

Constraints
non-holonomic, 137–149
temporal, 83–84
Co-occurrence matrices, 381–393
Cooperating expert systems, 685–693
Coordinate measuring machines, 439–445
Coordinated robots, 267–277
Criteria for applications of fuzzy control, 245–253

D

d.c. servo motors, 559–569
Deep-drawing process planning, 395–405
Diagnosis of wastewater treatment plants, 23–30
Distributed
decision-making, 311–319
problem solving, 105–117
Document reconstruction from code, 427–437
Dynamic structuring, 571–586

E

Embedded controllers, 533–543
Excitation control, 545–558
Expert systems
for identifying steels and cast irons, 455–459
for modelling river networks, 447–454
fuzzy, 513–519
qualitative, approximate reasoning, 23–30
real-time, 23–30, 31–37, 255–266, 361–366
Extraction approach (in image processing), 639–651

F

Fault diagnosis, 607–626, 653–663
Feature extraction, 31–37, 361–366
Flexible
assembly cell feeding processes, 67–76
production systems, 571–586
Flow models, multilevel, 607–626
Fourier analysis, 177–190
Fuzzy
control, 245–253
decision making, 311–319
logic, 119–135
networks, 1–21
Prolog, 119–135
reasoning, 521–531
set theory, 545–558

G

Graph theory for knowledge representation, 59–65

H

Hierarchical
path planning, 137–149
control, 571–586
Highly discrete signals, 361–366

Hopfield neural networks, 321–327
Human-machine interfaces, 607–626
Hybrid
    fuzzy controllers, 501–511
    modelling, 227–243
Hypertext, 349–360

I
Identification, nonlinear systems, 227–243
Image
    analysis, 593–606
    motion, 177–190
    processing, 31–37, 177–190, 191–204, 205–215
    differential, 639–651
    segmentation, 639–651
    texture, 381–393
Inductive learning, 279–288
Intelligent
    autonomous vehicles, 101–103, 119–135
    control systems, 367–380, 533–543, 571–586
    vision systems, 67–76

J
Job-shop scheduling, 321–327

K
Knowledge acquisition, 23–30, 279–288, 349–360
    for deep drawing processes, 395–405
Knowledge-based systems
    computer aided design of, 665–675
    for automated load sharing, 571–586
    for computer vision, 67–76
    for mine design and evaluation, 415–425
    for model-based reasoning, 653–663
    for real-time program verification, 289–298
    for routing in manufacturing, 407–413
    in inspection of electric lamps, 31–37
    in wastewater treatment, 23–30
    real-time, 105–117, 607–626
    temporal constraints, 83–84
    validation and verification of, 447–454
Knowledge
    explosion, 361–366
    elicitation, 653–663
    representation
        in safety-critical systems, 59–65
        based on multiple paradigms, 367–380
        temporal, 119–135, 255–266

L
Language analysis, 427–437
Learning
    from examples, 77–82, 665–675
    inductive, 23–30
    least mean square, 1–21

Least squares estimation, 177–190
Linear energy functions, 321–327
Logic programming, 427–437

M

Machine learning, 53–58
Mechatronics, 471–476
Measuring geometric tolerances, 439–445
  selection of measuring points, 439–445
  probe path generation, 439–445
Mission management
  task-level, 119–135
Mobile robots, 137–149, 151–160
Model-based reasoning, 653–663
Model reference control, 677–684
Mold-level control (continuous casting), 493–499
Monitoring industrial process, 607–626
Monotonic classification machines, 77–82
Multimedia information processing, 593–606

N

Navigation
  of autonomous road vehicles, 177–190
  of robots, 521–531
Neural networks
  associative memories, 1–21
  Albus CMAC, 1–21
  B-splines, 1–21
  comparison with rule based technique, 53–58
  classification of image textures, 381–393
  for nonlinear system identification, 227–243
  for road recognition, 169–176
  for solving two-point boundary-value problems, 161–168
  in multimedia information processing, 593–606
  recurrent, 471–476, 479–491
  Tank-Hopfield, 321–327
  temporally stable, 1–21
Neuro-fuzzy controllers, 479–491
Nonlinear
  control systems, 161–168, 677–684
  filters, 361–366

O

Object-oriented development, 119–135
  knowledge-based systems, 407–413
Object recognition, 2D, 299–310
Obstacle
  avoidance, 137–149, 177–190, 191–204
  detection, 191–204, 205–215
Optimal control of trajectories, 161–168

P

Path planning, 161–168
  collision-free, 267–277
Pattern recognition, 169–176, 329–333

Parallel processing, 77–82, 177–190, 205–215
Petri nets, 59–65
PID control, 559–569, 677–684
Planar robots, 267–277
Plant emulators, neural-net, 39–52
Pneumatic motor assembly, 67–76
Pontryagin's maximum principle, 161–168
Predictive control, 151–160
Probabilistic reasoning, 627–637
Process
    control, real-time, 255–266
    diagnosis, 665–675
Prototyping, 653–663

Q
Quantitative formulation of behaviour, 521–531

R
Radial basis function (for function approximation), 227–243
Railway traffic control, 311–319
Real-time programs
    validation, 289–298
    verification, 289–298
Reasoning, 521–531
    accelerated, 559–569
    model-based, 653–663
    probabilistic, 627–637
Refrigeration temperature control, 53–58
Reverse engineering, 427–437
Road recognition, 169–176
Robot
    architectures, real-time distributed problem-solving, 105–117
    manipulators, inverse kinematic transformations, 479–491
Rule-based techniques for control system development, 53–58
Rule induction, 53–58

S
Safe process start-up, 349–360
Safety-critical systems, 59–65
Scene understanding, 169–176
Sensor-based motion planning, 521–531
Sensor data fusion, 137–149, 521–531
Servo control problems, 161–168
Soft automation, 471–476
Sonar interpretation, 105–117
Speech recognition, 593–606
Surface texture, of wear particles, 381–393
Synchronous generators (electrical power), 545–558

T
Target tracking, 191–204
Temporal
    correctness, 31–37
    logic, 119–135, 665–675
    reasoning, 367–380

Terminal control problems, 161–168
Texture, in images, 381–393
Topological design, 279–288
Tracking moving and deformable objects, 205–215
Two-point boundary-value problem, 161–168

U
Ultrasonic
    transducers, 137–149
Uncertainty, 521–531
    management, 367–380

V
Verification, of real-time programs, 289–298
Visual tracking, 191–204

W
Wastewater treatment, 23–30
Wiener models, 227–243
